

BENTLEY

BL1833-Radiant Move Timepiece

Skeleton Movement in Shimmer Vintage Style beats in Rhythm

A movement is like an organic universe with gears, screws, springs, bearing and jewels these intricate components synchronizing in collaboration to accurately tell the time. Tik-tok is the way that we feel the heartbeat of the movement normally, however, Bentley Radiant Move Timepiece adopts open design for dial and skeleton movement to make the beauty of movement alive and unreserved on the wrist so the wearer can be amazed by the intricateness and life of the mechanic movement.

The sophisticated watch case and the coin grains on the side endows BENTLEY Radiant Move Timepiece an aristocratic elegance from the 18th century. There's an ingenious contrast between the open design watch dial and the time indexes on the outer rim. Classic and modern are interwoven in style while minimalist streamline is backdropped by the complex movement to break through the convention and create a trailblazer. Oscillator and escapement, complex gear, jewels bearing, winding mechanism are all bluntly displayed in mesmerizing golden skeleton movement. Transparent each base opens another side of movement to present the golden skeleton oscillation with classic logo B and Geneva stripes polishing.

BENTLEY Radiant Move Timepiece are designed in Central second and Versions, and case are modeled in stainless steel and golden stainless steel with multiple colors of dial and time indexes. Either the classic seven plates strap or elegant leather strap emits a unique Taste that both go well with masculinity and feminine resorts and the emphasis of craftsmanship and functions.
